

Ivor Thomas

Bio:

Ivor Thomas is the FAA's Chief Scientific and Technical Advisor (national resource specialist) for fuel system design. Ivor is responsible for providing technical advice in design, continued airworthiness, certification regulations, policy and procedures, accident investigation, and research engineering and development associated with fuel system designs. Ivor came to FAA from Boeing where he was the chief engineer of propulsion safety, fuel and auxiliary power unit systems. His work at Boeing spans more than 35 years in the field of propulsion installations, fire safety and fuel systems. He has provided technical support to accident investigations, most recently the investigation of TWA 800 and the Thai Airlines 737.
