

Nathalie De Beler - BIO

Nathalie DE BELER is a Human Factors expert. She has first performed Human Factors studies in various domains: railway transportation, nuclear power and Air Traffic Control. After years, she became specialised in Air Traffic Management domain. She performed numerous studies realising task analysis, HMI specification, validation process for experimentation based on simulation of new ATM concepts. Then, she spent 3 years in Eurocontrol Experimental Center, participating to the development of a method dedicated to the prediction and analysis of the impact of new ATM concepts onto the controllers' job mainly in terms of new skills, and new potential forma of human errors. She is now the project manager of IISU project
