

Developmental Tests Using the New Sonic Burner: A Manufacturer's Perspective
Keith Couilliard, The Boeing Company, Seattle, WA

Abstract. Boeing has been involved in the development of the burnthrough test method prior to the Rule issuance in 2003. Working closely with the FAA Technical Center, Boeing helped refine the present test method to ensure repeatability. Boeing will give its perspective on the test method, and the use of the new sonic burner for conducting developmental and certification tests.
