

*Inflight Fire Fighting Training Video*

David Blake, FAA, Atlantic City Intl. Airport, NJ

This presentation will review a new inflight fire fighting training video that highlights the issues discussed in FAA Advisory Circular 120-80. The video was produced by the Cabin Safety Research Technical Group, made up of international regulatory authorities. The video reenacts a variety of inflight fire scenarios and demonstrates appropriate responses by both the cabin crew and the flight crew. The video emphasizes fires in inaccessible areas and demonstrates how quickly conditions in the cabin can deteriorate due to inflight fires.
