

Training Needs Analysis: Cabin Crew Fire Training III
Corbett, C.L., McLean, G.A., Paskoff, L.N.

This research is based on a prior training needs assessment, produced by RGW Cherry and Assoc in July 2008 for the UK CAA, which included few US participants. Our replication of Cherry's study includes flight attendant participants primarily from US-based carriers and is intended to identify the potential for improvements to cabin crew in-flight fire training programs.
