SAE AS8036 Updates – Cargo Fire Detection Instruments

This presentation gives details of updates to Aerospace Standard AS8036, Cargo Fire Detection Instruments. False alarms from cargo fire detection systems have historically been high; this update is in response to a request from the FAA for an update that will be flowed into TSO C1d. Extra tests, designed to prove the false alarm resistance of smoke detectors have been added to the standard and these will be described. The new standard will shortly be released for public review before being published.
