

Development of safer modes of transportation of lithium batteries on large aeroplanes

EASA

The presentation will outline the scope and the status of the research projects funded by the European Union and launched in 2016 to develop safer modes of transportation of lithium batteries on large aeroplanes, and it will include information on the expectations in terms of future projects in the field. The presentation will also describe the current status of European regulations for lithium batteries and involvement of EASA in the development of international standards, as well as the work performed by the Agency during 2015 and 2016 within a safety promotion scenario.
