

Fire Containment Solutions – R&D and Testing

Pravin Gunasekera

With the rise in air transport of lithium battery and undeclared dangerous goods shipments, there is an ever increasing threat of cargo fire hazards. With over a decade of R&D, testing and operational use, Fire Containment Covers (FCC) have been introduced as a solution to this risk. Using the same technology and design concepts, several other variants have been implemented including Container-FCC, Fire Containment Bag (FCB), Fire Containment Pouch (FCP) and Skid FCB.
