

Karen De Lannoye

Karen obtained her bachelor and master degree in physics at the university in Bruxelles (Belgium). Currently, she is a fourth year PhD student at the researchcenter in Jülich (Germany). She worked on elaborating a tube furnace with a.o. an online mass loss measurement. Part of her work is to compare this tube furnace with other small and bench scale experiments. Within this framework she conducts several kinds of experiments with polymethyl methacrylate. Currently, she is a guest researcher at NIST for 6 months.
