

## **Waste Compartment Fire Containment Proposed Non-Test Methods of Compliance (MOCs)**

Scott Campbell

All Waste Compartments, Meal Trolleys & Waste Trolleys must be substantiated to 14CFR 25.853(h) by test or analysis. Industry and regulators lack harmonized published methods of compliance (MOCs) to substantiate by analysis. The Fire Containment Task Group has been meeting regularly to develop and harmonize non-test methods of compliance. This task group is comprised of tier 1 manufacturers, OEMs, regulators and airlines.

This presentation will outline progress made by the Fire Containment Task Group as well as highlight the commitment of regulators, airlines, OEMs and interior component suppliers to work closely together to ensure passenger and aircraft safety. Additionally, will present a brief follow-up to the waste compartment fire containment test standardization activity since the last Triennial Conference.
